Background:	This gene encodes a member of the membrane-associated guanylate kinase protein family. The encoded protein may play a role in clustering of NMDA receptors at excitatory synapses. It may also negatively regulate cell proliferation through interaction with the C-terminal region of the adenomatosis polyposis coli tumor suppressor protein. Mutations in this gene have been associated with X-linked mental retardation. Alternatively spliced transcript variants have been described. [provided by RefSeq]
Synonyms:	MRX; MRX90; NEDLG; PPP1R82; SAP102; XLMR

HEK293T cells were transfected with the pCMV6-ENTRY control (Left lane) or pCMV6-ENTRY DLG3 ([RC210860], Right lane) cDNA for 48 hrs and lysed. Equivalent amounts of cell lysates (5 ug per lane) were separated by SDS-PAGE and immunoblotted with anti-DLG3. Positive lysates [LY402837] (100ug) and [LC402837] (20ug) can be purchased separately from OriGene.

HEK293T cells transfected with either [RC210860] overexpress plasmid (Red) or empty vector control plasmid (Blue) were immunostained by anti-DLG3 antibody (TA502191), and then analyzed by flow cytometry.
